

```
public boolean answerCell(boolean isMorning, boolean isMom, boolean
isAsleep) {
    if (isAsleep) { // this applies in ALL CASES, so it goes first.
        return false;
    }
    else if (isMorning) {
        return isMom;
    }
    else { // !isAsleep && !isMorning
        return true;
    }
}
```

```
public boolean answerCell(boolean isMorning, boolean isMom, boolean
isAsleep) {
    if (isAsleep) { // this applies in ALL CASES, so it goes first.
        return false;
    }
    else if (isMorning) {
        if (isMom) {
            return true;
        }
        else {
            return false;
        }
    }
    else { // !isAsleep && !isMorning
        return true;
    }
}
```
