Logic-1: more20

Return true if the given non-negative number is 1 or 2 more than a multiple of 20.

```
public boolean more20(int n) {
}
```

Step 1
Declare a variable of the same type as the return type of the method.
Call the variable **more**. Initialize **more** to false.

```
public boolean more20(int n) {
  boolean more = false;
  return more;
}
```

Step 2
The question asks us to return true if n is *1 or 2 more than a multiple of 20*.
This means that, if you divide the number by 20, the remainder will be one or two.

```
public boolean more20(int n) {
  boolean more = false;
  if (n % 20 == 1) {
    more = true;
  }
  if (n % 20 == 2) {
    more = true;
  }
  return more;
}
```
