

```
public int[] tenRun(int[] nums) {
    int newValue = -1;
    for (int i = 0; i < nums.length; i++) {
        int n = nums[i];
        if (n % 10 == 0) {
            newValue = n;
        }
        else if (newValue != -1) {
            nums[i] = newValue;
        }
    }
    return nums;
}
```
